- Own manufactured E7 – 7 Seat Taxi
- Custom Made Minibus
- Electric Car – Van & Minibus
- Custodial Vehicles for Prisoner Transportation
- CCTV – Security vehicles
- Mobility – special wheelchair access vehicles
- Crash Repair Centre

E7 £473m Development

Purpose Built Taxi

Think Smart, Think 

Spacious rear passenger compartment

Protective bumpers with integral slip strips

Original Peugeot® pull-out ramp

Development

A £473 million development programme has created the ideal combination of engine, clutch and gearbox, designed and tested in tandem with the E7's high-strength monocoque vehicle body. Modern design excellence is carried through to the superb driving position, high impact partition screen and comfortable rear passenger compartment to complete the ideal hackney taxi.

Side rubbing strips and large, multi-section bumpers provide vital protection against minor bumps and scrapes. And unlike many other taxis, the E7 comes to you with the reassurance of the highest possible standard of safety testing – European Whole Vehicle Type Approval (Type Approval number e11*2001/116*0315).

WAV - Wheelchair Access Vehicles

Wheelchair Cars

Accommodating driver, wheelchair passenger and up to two seated passengers or driver and up to four seated passengers.

Wheelchair MPVs

Accommodating driver, wheelchair passenger and up to six seated passengers.

Wheelchair Minibuses

Wheelchair accessible minibus conversions available on a wide range of base vehicles, tailor made to suit your accessibility needs. Accommodating up to 17 seated passengers or six wheelchair occupants.

ELECTRIC VEHICLES

Controlled Power

Allied Electric's unique remote electronic diagnostic & management system - zWeb™ - is the real key to advanced electric vehicle performance and reliability. zWeb™ is the brain of the operation, monitoring individual cell charge and temperature to maximise overall battery performance and

delivering exactly the right energy to the electric power train. zWeb's™ innovative online technology even means we can monitor the health of your battery throughout its life, so we'll know in advance if anything needs attention. zWeb™ also provides in-built GPS tracking for your vehicles.

Allied Electric is an innovative vehicle manufacturer dedicated to reducing environmental harm by bringing practical and reliable zero emission vehicles to market.

Allied Electric products combine the latest in battery technology and electronic management software together with a tried and tested range of production vehicles.

All Electric - All Zero

Allied Electric zero emission vehicles are just that – no emissions are produced directly in propelling the vehicle. Powered entirely by leading edge Lithium-Ion batteries no carbon, particulate or other pollutants are produced wherever the vehicle is operating.

Service & Warranty

Your zero emissions vehicle comes with all the familiar reassurance of full manufacturer's warranty on the base vehicle, plus three years unlimited mileage cover for the electric motor and zWeb™ remote electronic diagnostic & management system. Maintenance requirements are as per manufacturer's recommended service intervals but, with no engine to maintain, garage costs and service down-times are significantly lower. The electric power train and management system require annual health check.

Safety Matters

All vehicles in the Allied Electric range are manufactured in accordance with UK and European construction regulations.

MORE Choice!

This is only a small selection of over 100 models that we can supply, we also cater for:

- CCTV Security Vehicles
- Prisoner Transportation Vehicles
- Taxis for Private Individuals
- Custom Made Taxis for large groups
- Electric – Cars, Vans & Minibuses
- Wheelchair accessible Cars, Vans & Minibuses
- And we can design around your needs!

All of our products go through exactly the same tests as the car manufacturers, we employ 400 people in our car production plant in Scotland and we are the leaders custom made and wheelchair access vehicles.
